- Non rocking 3-point suspension design, for silent operation.
- Meets the requirements of CD 534 v0.1.0 (formerly HA 104/09).
- Captive hinges reduce theft risk whilst allowing easy lifting.
- The enlarged frame corners help to dissipate loads onto the foundation, providing a longer service life and increased reliability.
- Frame gussets are supports which reinforce the corners where the frame sections meet, distributing stress evenly, preventing damage to the frame or the access cover.

- Keyway lifting points are provided on the frame for safe handling.
- Holes in the frame flange where mortar can pass between the underside and top side, creating an interlock, providing greater strength.
- Reversible hinge allows the grating to hinge with the direction of the traffic flow, improving safety.
- Surface texturing above and below the flange enables better mortar engagement, reducing any lateral movement which could result in cracking.

AVAILABLE OPTIONS

Screw locking

Screw locking deters unauthorised access to the chamber. An extended shank socket set is required to engage the locking screw.
