

HOW MUCH COULD YOU SAVE USING ARMADILLO, THE HARD HAT FOR YOUR IRONWORK?

Armadillo protector shells are designed to be placed over manhole covers and gully grates - providing temporary protection from group five traffic during the construction phase of a project. This ensures manhole covers and gully grates can start their service life in 'as new' condition without the need for repair or replacement.

Compatible with a range of Wrekin products, including ClickLift™, our Armadillo provides a solution that saves groundworkers and developers time and money - allowing them to completely focus on task at hand while protecting the environment and improving health and safety.

Prevents silt and pollutants entering the drainage system

No need to replace ironwork damaged during the construction phase

Armadillo removes the need for drains to be jet washed

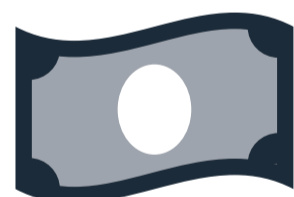

Saves £££ by removing the potential for reinstatement works

BUT EXACTLY HOW MUCH TIME AND MONEY CAN BE SAVED BY USING ARMADILLO?

ONE FULL DAY

AND

£1,050

Per housing development

(Based on eight pieces of ironwork being replaced)

WHICH EQUATES TO

96

15-minute tea breaks

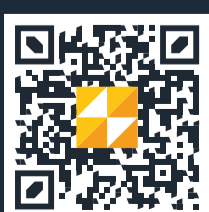

525

£2 bacon sandwiches

16

90-minute football matches
